

CHECKLIST

School Onboarding Checklist

Print one copy per school. Tick boxes as you go.

1. School identity (verify only)

School name, location, and board code in the ERP match your letterhead. If anything is wrong, raise it before starting data entry — fixing it later means re-issuing receipts.

2. Classes & sections

`classes.csv` — one row per class the school actually runs this year.

`sections.csv` — one row per section per class. Skip if a class has only one section.

`subjects.csv` — one row per subject per class. Mark co-curricular subjects (Art, Music, PT) with `co_curricular = yes`.

3. Students

`students.csv` — one row per student.

Admission numbers are unique and follow your existing format.

Class and section spellings match `classes.csv` / `sections.csv` exactly.

Mobile numbers are 10 digits, no +91, no spaces, no dashes.

Date of birth is DD-MM-YYYY (matches CISCE registration format).

Profile photo links pasted in `profile_image_url`. See [image-guide.pdf](#).

Father / mother photo links pasted in `father_image_url` and `mother_image_url`. Leave blank if not collected.

4. Staff (and their logins)

`staff.csv` — one row per staff member who needs a login.

Phone numbers are 10 digits and unique (this is their login username — no two staff can share a phone).

`role` is one of admin, manager, staff.

`department` filled for staff rows only (fees / academics / library / results). Leave blank for admin and manager.

`initial_password` is set. Each staff member is told to change it on first login.

5. Fees

fee-structures.csv — one row per (class × academic year × scope). Scope is school or hostel.

fee-components.csv — line items inside each structure. Yearly fee, monthly fee, registration, caution, admission one-time.

Component totals add up to the structure total amount.

6. Library (optional — skip if not using)

books.csv — one row per copy (so a 5-copy title is 5 rows, each with its own code).

library-settings.csv — single row with the school's loan rules.

7. Images on Drive

All photo folders shared as "Anyone with the link can view".

File naming follows admission number (e.g. K-2026-0142.jpg).

No image exceeds 2 MB. Compress with tinypng.com if larger.

The shared link in each CSV row opens the correct photo (spot-check 10 random rows).

8. Hand-off

All CSVs in the school's folder have data, not just headers.

No CSV has a row where every cell is empty.

No special characters beyond standard Hindi/English text (avoid smart-quotes from Word — paste through a plain text editor).

Filed with the implementation admin: this completed checklist + the full school folder.
