

Hosting Profile & Parent Photos

The ERP stores links to photos, not the photos themselves.

Every photo goes on Google Drive, you copy the sharable link, and paste that link into the CSV. This keeps the ERP fast and your school's Drive remains the source of truth for the originals.

One-time Drive setup

- Create a Drive folder for the school, e.g. Adeshwar - Kondagaon - 2026-27.
- Inside it, create sub-folders:

students/	
profiles/	• student face photos
parents/	• parent photos
staff/	
profiles/	

- Share each sub-folder as **Anyone with the link 'Viewer'** Without this, the ERP can't render the image and ID cards will be blank.

Naming convention

Always name the file after the admission number (students) or phone number (staff). This makes mis-pasted links easy to catch by eye.

- Student profile: K-2026-0142.jpg
- Student father: K-2026-0142-F.jpg
- Student mother: K-2026-0142-M.jpg
- Staff profile: 9876543210.jpg

Getting the sharable link

- Right-click the image ' Share.
- Make sure the access is "Anyone with the link ' Viewer".
- Click "Copy link". The link looks like:

<https://drive.google.com/file/d/1aBcDeFgHi.../view?usp=sharing>

- Paste the whole link into the CSV — the ERP extracts the file id and renders the image. Do not shorten it.

DO

- Compress before uploading. JPG, max 2 MB, 1080 px on the long side.
- Use the school's official Drive account, not a personal Gmail.
- Keep the original folder structure intact after handover.
- Spot-check 10 random links before submitting (open in incognito).
- Use .jpg or .png. HEIC files from iPhones do not render.

DON'T

- Don't upload PDFs of photos. Export the JPG/PNG and upload that.
- Don't set Drive sharing to "Restricted" or "Specific people only".

- Don't move or rename files after pasting links into the CSV.
- Don't paste a folder link in a per-student row. One link per image, always.
- Don't use WhatsApp Web's downloaded .jfif images. Re-save as .jpg.
- Don't put images in "Shared with me" — keep them inside the school's own Drive.

When in doubt

Open the link in an incognito browser tab while signed out of Google. If the image loads there, the ERP can load it too. If you see a "Request access" screen, the sharing setting is wrong.
