

Pathshala ERP — Franchise Onboarding

What's in the requirements folder, and how to use it

This kit brings a new Adeshwar Public School unit online in the Pathshala ERP. Each school is fully isolated inside the database: students, fees, attendance, library, results — none of it crosses school boundaries. Fill the templates, upload the photos, and hand the folder back to the implementation admin.

What's in here

- requirements/onboarding-overview.pdf — this document
- requirements/checklist.pdf — end-to-end onboarding checklist (print one per school)
- requirements/image-guide.pdf — how to host profile photos on Google Drive
- requirements/01-kondagaon/ — Kondagaon (main unit)
- requirements/02-pharasmaon/ — Pharasmaon branch
- requirements/03-chipawand/ — Chipawand branch

Every school folder has the same set of CSV templates with headers only — the school office fills the rows.

Filling order

CSVs depend on each other (a student needs a class to exist first). Fill them in this exact order:

1. **classes.csv** — every class the school runs (e.g. Class 1, Class 2 ...)
2. **sections.csv** — sections inside each class (A, B, C ...)
3. **subjects.csv** — subjects per class; mark co-curricular ones
4. **students.csv** — the roster; spelling of class + section must match steps 1 & 2
5. **staff.csv** — teachers, fees clerks, librarians, the principal
6. **fee-structures.csv + fee-components.csv** — fee plan per class
7. **books.csv + library-settings.csv** — library catalog (optional)

Photos

Profile photos, parent photos, and ID-card photos go on Google Drive. Paste the sharable link into the CSV. The image-guide.pdf has the full Drive workflow, naming convention, and do's and don'ts.

What you do NOT need to supply

- School name, address, board code — already coded into the ERP from the three franchise units.
- Login credentials — admin creates these from staff.csv and prints the phone+password handouts.
- Receipt and ID-card templates — generated by the ERP, not editable per school.

Tip: keep one copy of checklist.pdf per school as you work through the kit, and tick boxes as you finish. The checklist is what the implementation admin uses to verify the folder before importing.
